                                                               Email: est@watson.wustl.edu
Library constructed by N. Garrett, E. ellefroid, and A.M. Zorn
(Wellcome/CAC Institute). DNA Sequencing by: Washington University
Genome Sequencing Center.

Clone distribution: Xenopus clones from this library are available
trrough the T.M.A.O.E. Consortium/LINIA at: info@image.llnl.gov
Seq primer: -40RP from Gloco
High quality sequence stop: 291.

Library constructed by A.M. Zorn (Wellcome/CRC Institute). DNA
Sequencing by: Washington University Genome Sequencing Center
Clone distribution: Xenopus clones from this library are available
through the I.M.A.G.B. Consortium/LiNL at: info@image.llnl.gov
Possible reversed clone: similarity on wrong strand
Seq primer: -40UP from Gibco
High quality sequence stop: 379.
Amphibia; Batrachia; Anura; Mesobatrachia; Pipoidea; Pipidae; Xenopodinae; Xenopus.

Library constructed by A.M. Zorn (Wellcome/CRC Institute). DNA
Sequencing by: Washington University Genome Sequencing Center
Clone distribution: Xenopus clones from this library are available
through the I.M.A.G.E. Consortium/LINL at: info@image.llnl.gov
Possible reversed clone: similarity on wrong strand
Seq primer: -40UP from Gibco
High quality sequence stop: 309.

Library constructed by A.M. Zorn (Wellcome/CRC Institute). DNA
Sequencing by: Washington University Center
Sequencing by: Washington University Center
Clone distribution: Kenopus clones from this library are available
through the I.M.A.G.E. Consortium/LINL at: info@image.llnl.gov
Possible reversed clone: similarity on wrong strand
Seq primer: -40UP from Gibco
High quality sequence stop: 375.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ð
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence is that of novel vector plasmid pUNI-10. It includes: the conditional origin of replication from R6K-gamma, derived from plasmid R6K (ATCC 3720); a Not1-Kpn1 polylinker that derilitates the exchange of lox sites; a wild-type loxP site (see also AAZ58066); a polylinker used for the insertion of genomic DNA or CDNA sequences; a bovine growth hormone polyA site; a T7 terminator; and a kanamycin remissed for the insertion of genomic DNA or cample of novel Univertors or pUNI vectors of the invention is an example of novel Univertors or pUNI vectors of the invention is an example of novel Univertors or pUNI vectors of the invention is an example of novel Univertors or pUNI vectors of the invention is that have a sequence-specific recombinase target site (e.g. loxP) preceding the insertion site for the gene of interest, a selectable marker gene (optional) and a conditional origin of replication factor (optional). The vectors are designed to contain a active only in host cells expressing the requisite transacting replication factor (optional). The vectors are designed to contain a gene of interest but to lack a prometer for expression of the subcloming of mucleic acid sequences. The method is referred to subcloming of mucleic acid sequences. The method is referred to subcloming of mucleic acid sequences in vivo and in vitro without the need of restriction endomucleases. The method is referred to set the need of restriction endomucleases. The method is referred to sea the Univector Plasmid fusion events are under the control of novel regulatory elements. A second UPS-related method allows for the precise transfer of coding sequences alone from cubic model weet the control to a host vector. UPS further provides means for the subcloning of entire nucleic acid libraries and the directional
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             991

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The sequence shown is that of a novel transposon useful for sequencing long DNA sequences. The transposon comprises a partial sequencing long DNA sequences. The transposon comprises a partial phages SPG and T7 inserted near the opposite ends of Tn5. At each terminus a segment of 19 nucleotides of either the O-end or I-end of Tn5 are present and restriction enzyme sites are positioned throughout the sequence (sep. with one at either end, less than 20 bases from each terminal segments of Segments of foreign DNA of at least 17 bases are positioned directly adjacent to each restriction site. The transposon also comprises a Tn5 transposate gene insert and a kanamycin selectable marker for the transposable DNA unit.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1 CGCTGGAGGATCATCCAGCCGCCGTCCCGGAAAACGATTCCGAAGCCCAACCTTTCATAG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             420
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    480
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This sequence represents the Thisegal transposon used in the method of the invention. The method is for RNA transcription, and comprises the insertion of the Thisegal transposon into an E. coli DNA molecule to obtain hyperexpression of genes adjacent to strong promoters SP6 or T7. The transposon is useful for stimulating the transcription of genes adjacent to the heterologous SP6 or T7 promoters in E. coli, for making RNA transcripts in vitro and the hyperexpression or specific transcription of genes (adjacent to the SP6 or T7 promoters in I. vivo. This sequencial as a less laborious method of sequencing long DNA molecules than current methods such as base-specific chemical cleavage and enzymatic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     981

Ican be used for sequencing bacterial genomic DNA without recombinant DNA cloning and also for sequencing DNA cloned in phages or multicopy plasmids. It may also be useful for RNA sequencing with SP6 and IT RNA polymerases, for making RNA transcripts in vitro and for hyperexpression or specific transcription of adjacent genes in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 DB 13; Length 3177;

                                                                                 Plasmid encodes a fusion protein consisting of 1 or 2 affinity peptides bonded directly or indirectly to a biologically active protein (i.e. dibydrofolate reductase). The presence of adjacent His residues in the affinity peptides allows purificn of the biologically active protein by see also AAR80955-8 and AAN80960-63. (Updated on 25-WAR-2003 to correct PR field.)
